Hiring Manager

[Company]

Re: [AI Enablement Manager / related title]

Dear Hiring Manager,

I am applying for the [AI Enablement Manager] role at [Company]. I help organizations get new systems actually used — not just launched. That work has lived in customer success, CRM, marketing operations, and executive reporting. I am now completing an MIT Professional Education certificate in Agentic AI so I can lead the same kind of adoption for generative and agentic tools: intake, training, workflow design, measurement, and responsible guardrails.

AI enablement succeeds when someone can sit between the business and the build. I have done that for years. At Blue Technologies I translated complex IT infrastructure into Quality Business Reviews leadership could act on, cut monthly churn 15% with proactive account-health work, and held 90% average CSAT. At Best Food Trucks I led a distributed team across marketing, analytics, customer success, and operations for a national platform serving 100K+ monthly users, and I used CRM and behavioral data to drive engagement rather than one-off campaigns. Earlier, at Cogent, I automated digital intake that reduced call volume 80% — a practical example of taking a painful workflow, putting a system in front of it, and proving the result.

The MIT Agentic AI certificate is how I am formalizing the next chapter: how agentic systems attach to enterprise tools, where human-in-the-loop belongs, and why bias and governance cannot be an afterthought. I am not applying as a research scientist. I am applying as an operator who can run enablement like a product — clear problem statements, prioritized use cases, training that people will attend, and KPIs for adoption, time saved, quality, and risk.

I would be glad to talk about how this role's use cases map to intake, change management, and value tracking. Thank you for your time.

Sincerely,
Nicole Jury
