Hiring Manager

[Company]

Re: [AI Enablement Manager / related title]

Dear Hiring Manager,

I am applying for the [AI Enablement Manager] role at [Company]. I help organizations get new systems actually used — not just launched. That work has lived in customer success, CRM, marketing operations, and executive reporting. I am completing MIT Professional Education's *Applied Agentic AI for Organizational Transformation* with Prof. John Williams and Dr. Abel Sanchez so I can lead the same work for generative and agentic tools.

AI enablement succeeds when someone can sit between the business and the build. I have done that for years. At Blue Technologies I translated complex IT infrastructure into Quality Business Reviews leadership could act on, cut monthly churn 15% with proactive account-health work, and held 90% average CSAT. At Best Food Trucks I led a distributed team across marketing, analytics, customer success, and operations for a national platform serving 100K+ monthly users, and I used CRM and behavioral data to drive engagement rather than one-off campaigns. Earlier, at Cogent, I automated digital intake that reduced call volume 80% — a practical example of taking a painful workflow, putting a system in front of it, and proving the result.

The MIT program is the bridge into this role. I am studying how agents connect to digital ecosystems (the CRM and data stacks I already run), how use cases differ by business function, and what it takes to get from a successful pilot to daily practice. That last-mile work is enablement: intake, training, measurement, and handoff. The curriculum also covers agent risk and cybersecurity, governance, compliance, agent testing, and ethics — including bias in automated decisions — so adoption does not outrun control. I am not applying as a research scientist. I am applying as an operator who can run enablement like a product: clear problem statements, prioritized use cases, training people will use, and KPIs for adoption, time saved, quality, and risk.

I would be glad to talk about how this role's use cases map to intake, change management, and value tracking. Thank you for your time.

Sincerely,
Nicole Jury
